EDUCATION

Aurora University Bachelors of Science in Computer Science	May 2024
Object-Oriented Programming	Classes Taken
Web Application Development	
Computer Systems/Architecture	
Computer Security	
Database Design & Implement	
Data Structures and Algorithms	
Software Test and Verify, Validate, and Quality Assurance	

SKILLS

Programming Languages: JavaScript, Python, Java, C++, C#, Swift, HTML, CSS

Frameworks & Libraries: Spring Boot, React Native, React.js, Bootstrap

Database Management: MySQL

Other Skills: Linux, Windows, MacOS, VirtualBox, VMware, Azure

WORK EXPERIENCE

Internship CME Group Aurora, IL	July 2023 - Present
- Conduct audits of server cabinets across four data halls, managing over 800 server cabinets to ensure optimal utilization and organization. - Granted access and escorted visiting engineers to their requested server cabinets while ensuring a seamless and secure process. - Shadow infrastructure engineers, while they troubleshoot and perform server maintenance such as installations, part replacements, and cable reseating.	

PROJECTS

Portfolio Website (<https://egarcia0992.github.io/>) - Developed a fast and responsive portfolio website utilizing HTML, CSS, and Bootstrap to showcase my web development skills and other projects.

React Native Questionnaire/Journal App - Collaborated with a team of three peers to design and develop a React Native questionnaire mobile app for a company called Fringe. JIRA was integrated into our workflow processes to help track and manage time. Firestore/Firebase was used for user authentication and database solutions, ensuring a seamless user experience and efficient data handling.

iOS Weather App - Developed a mobile application using Swift and SwiftUI to provide relevant weather information to users. The OpenWeatherMap API was integrated to retrieve weather data and then process JSON responses to display weather, forecasts, and other relevant information.

Inventory Manager Website - Built a full stack website using React.js in the frontend and Java Spring Boot for the backend that connects to the SQL database for storage. The website allows for creating, updating, and deleting of items and customers. Deployed the frontend, backend, and database to Azure for cloud hosting to ensure scalable and reliable access.
